

Vidabra

MUVU
ASCIRE

www.vidabra.es

A top developed with a team of oncological radiotherapy experts and validated by real patients.

Textile laboratory constantly striving to improve dermatological welfare, having as its mission to protect and care for health by preventing skin problems.

We combine natural raw materials and state-of-the-art technology to create revolutionary fabrics that help to keep skin clean and healthy, re-establishing its immunological properties to favour speedy recovery.

The result: healthy skin recovers its balance and protective barrier by natural means, staving off aggressions and erosions.

Pioneers in breast radiotherapy techniques in Europe, the experience of the Ascires medical team has inspired the anatomic design of the Vidabra top.

With more than 50 years of medical experience and a solid background in radiotherapy, the Ascires Biomedical Group has taken clinical needs into account to create this top, which feels like a second skin.

An intimate garment inspired by women's comfort and concern for the areas affected by breast radiotherapy.

Vidabra

This is the first top that reduces the impact of radiotherapy and nurtures sensitive skin.

Designed and clinically validated to prevent radio-dermatitis.

In spite of advances in breast radiation, skin toxicity continues to have a negative effect on patients' quality of life. So far, there has been no product or cosmetic successful in managing radiation dermatitis.

Indicated for:

Radiotherapy	Submammary mycosis
Breast-conserving surgery	Eczema and dermatitis
Breast reconstruction	Excess perspiration
Scar reduction	Mycosis
Breast swelling	Delicate skins

regenactiv[®]

Regenactiv[®] textile technology is based on the interaction between two fibres which, when woven together, give MUVU garments their protective qualities.

Assists the healing process by maining skin free it aseptic.

CH-VISCOSE

Cellulose-based fibre laced with marine-based particles, giving the garment its protective qualities.

IONIC POLYAMIDE

Thread laced with ionic silver particles. Gives the garment its anti-bacterial properties. Helps to regulate body temperature.

Properties of Regenactiv[®]

Protection against fungi and bacteria.

Reduces and prevents skin irritation.

Great absorptive capacity.

Patented technology EP 3 106 553 B1

Findings of clinical validation

Clinically assessed by an independent dermatologist who did not know which patients had or had not used the top:

“Almost half of the patients who had used the top (46.3%) experienced no dermatological issues; the rest experienced only mild irritation (grade 1 dermatitis) In patients who had NOT used the top, the number of cases of mild skin complaints increased (grade 1 dermatitis), with some attaining grade 2 and even grade 3 dermatitis”.

Objective assessment using skin laser Doppler flowmetry:

“A statistically significant difference was observed in post-RT levels among patients who used the top and those who did not, with fewer dermatological complaints being observed in users of the top.”
